

SPECIFICATION AMENDMENTS

In the specification at column 2, line 13, please delete the paragraphs previously added in the PRELIMINARY AMENDMENT and substitute therefor the original language found at column 2, lines 13-24 which reads as follows:

--The present invention is directed to a multi-segment radial bearing generally comprising a bushing, a shaft or rotor, a plurality of compliant foils, and a like plurality of foil undersprings.

The interior bore of the bushing includes a plurality of anti-rotation retainers that are equally spaced and extend the axial length of the interior bore, which may be either cylindrical or contoured. These generally T-shaped retainers divide the interior bore of the bushing into a like plurality of lobes, with each lobe having a compliant foil and foil underspring disposed therein between adjacent generally T-shaped retainers.--
